

# EPD30-PRO FEATURES

**1.5" Diameter Wet Air Outlet** – a portion (approx. 15%) of the "Regen Air" is being discharged as warm air through the "Wet Air Out" duct, making it easy to vent the moisture away using standard push fit waste water connector.

\*\*\*Note: Water is not drained away as liquid, it is vented away similar to a tumble dryer.

**Dry Filtered Air Out** – most of the air stream (approx. 85%) is discharged directly through this "Dry Air Outlet"

**Carrying Handle** - easy-to-carry by one person, can be removed if the product is being installed and replaced with an optional top lid without the handle.

**All Stainless-Steel Construction** – inside and outside designed for longevity and strength.

**Four Anti-Scratch Plastic Feet** - patented design that swivel out to provide anchor points for the dehumidifier when mounted on walls or ceilings.
